Flock

Chief Babkiewicz,

I'm reaching out with an important update about how your team accesses Flock.

Protecting the security of your data and your community starts at the login. Multi-Factor Authentication (MFA) has been the default for all Flock accounts since 2024, and it remains the single most effective way to keep unauthorized users out of your system. Our records show your organization does not yet have MFA required for login.

Effective August 1, 2026, MFA will be required for all Flock organizations. After that date, users will be prompted to verify their identity with a second factor the next time they sign in, and access to the system will require that step to be completed.

What You Need to Do:

MFA will be **automatically enforced for all users** who have not already turned it on. If you'd like to control when your team transitions, please contact our Support team in advance so we can help you enable it on your preferred timeline. We currently support:

- **Authenticator apps (recommended)** — Available on both mobile and desktop (for example Microsoft Authenticator, Google Authenticator, Okta Verify, and others). These apps generate a time-based code that you enter in addition to your password.
- **Text message (SMS)** — A one-time code sent to a mobile number at each login.

We are also planning to support **physical security tokens** (for example, YubiKey) in the future. If your organization requires physical security tokens in order to use MFA, please let us know and we will work closely with your organization to help address your need.

We're Here to Help:

If you have questions or would like a hand getting set up, please reach out to support@flocksafety.com and we'll walk you through it. We can also help you confirm the best method for officers and staff who don't have department-issued phones.

In the meantime, you can also visit our Multi-Factor Authentication Help Center article for step-by-step instructions and FAQs on getting set up and managing your settings.

Thank you for partnering with us to keep your Flock system, and the data within it, secure.

Best,

Chris Colwell
